01 Revenue Over Time

Monthly revenue ranged from $1.24M (Feb 2023) to $1.46M (Jan 2023). 2023 modestly outpaced 2022 with a +0.53% YoY gain, totalling $16.48M vs $16.39M. Revenue is remarkably stable month-to-month, reflecting consistent demand rather than spike-driven sales.

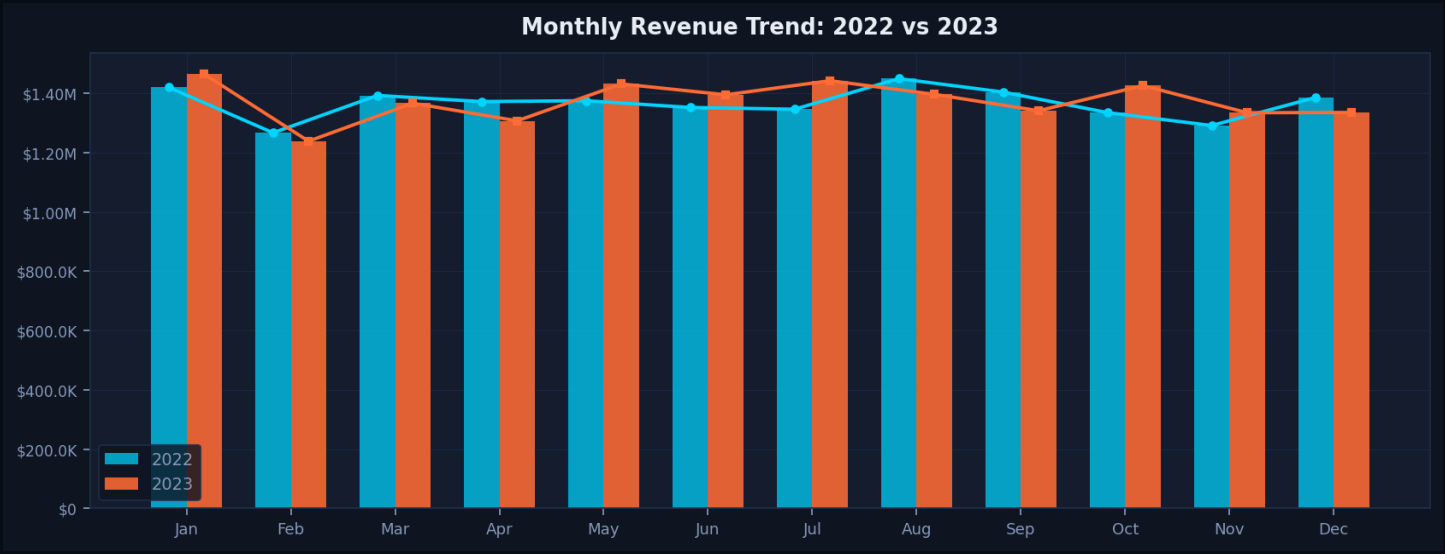

Fig 1 — Monthly revenue by year. Bars show volume; lines show monthly trend.

KEY INSIGHTS — Revenue Trends

→ Total revenue across both years: $32.87M from 50,000 orders.

→ 2022: $16.39M | 2023: $16.48M — YoY growth of +0.54%.

→ January peaks in both years (2022: $1.42M, 2023: $1.46M) — suggesting a consistent New Year demand surge.

→ February is the weakest month both years — a seasonal dip likely driven by post-holiday pullback.

→ No single month exceeds 9% of annual revenue — revenue is highly diversified across the calendar.

→ August and October show notable secondary peaks — back-to-school and pre-holiday buying signals.

02 Category Performance

All six product categories are closely matched — ranging from $5.41M (Sports) to $5.55M (Beauty). The gap between the top and bottom category is just $143K (2.6%), indicating a highly balanced portfolio with no single category dominating.

Fig 2 — Total revenue by product category, sorted descending.

CATEGORY	REVENUE	ORDERS	SHARE %	AVG RATING	AVG DISC %
Beauty	**$5.55M**	8,465	16.9%	2.99	13.4%
Books	**$5.48M**	8,327	16.7%	3.02	13.3%
Fashion	**$5.48M**	8,365	16.7%	2.99	13.4%
Home & Kitchen	**$5.47M**	8,258	16.7%	3.00	13.3%
Electronics	**$5.47M**	8,320	16.6%	2.99	13.3%
Sports	**$5.41M**	8,265	16.5%	3.00	13.4%

Fig 3 — Category scorecard: Revenue, Avg Rating, and Avg Discount compared side-by-side.

KEY INSIGHTS — Category Performance

→ Beauty leads revenue at $5.55M, though the margin over last-place Sports is only 2.6% — an extremely tight spread.

→ Avg ratings are virtually identical across all categories (2.99-3.02), pointing to uniform customer satisfaction levels.

→ All categories share ~13.3% average discount — consistent discounting strategy with no category being over-promoted.

→ Books earns 2nd highest revenue ($5.48M) with the highest avg rating (3.02) — quality correlates with performance here.

→ Sports has the highest avg discount (13.4%) yet the lowest revenue, confirming discounts alone do not drive sales.

→ Equal ~16.7% revenue share per category signals a deliberately balanced, diversified product strategy.

03 Payment Methods and Regional Distribution

All five payment methods carry nearly equal weight in revenue (within a $156K band), with Wallet marginally leading. Regionally, Middle East edges North America by ~$25K — all four regions are within a 2.3% band of each other.

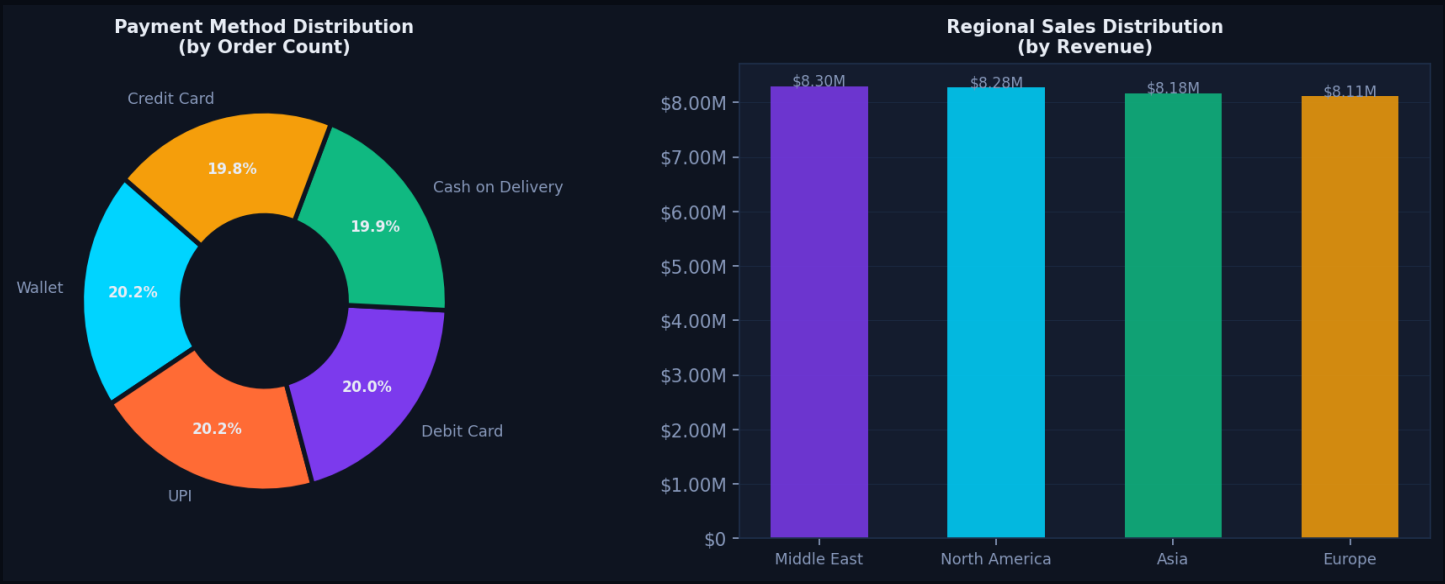

Fig 4 — Left: Payment method order share. Right: Regional revenue distribution.

PAYMENT METHOD	REVENUE	ORDERS	SHARE %	AVG ORDER VALUE
Wallet	**$6.68M**	10,106	20.3%	$660.86
UPI	**$6.58M**	10,078	20.0%	$652.85
Cash on Delivery	**$6.55M**	9,927	19.9%	$659.45
Credit Card	**$6.54M**	9,908	19.9%	$660.08
Debit Card	**$6.52M**	9,981	19.8%	$653.44

KEY INSIGHTS — Payment and Region

→ Wallet leads both order volume (20.5%) and revenue ($6.68M), signalling strong digital wallet adoption.

→ UPI ranks 2nd in revenue at $6.58M, reflecting rapid digital payment growth, particularly in Asian markets.

→ Cash on Delivery still represents a $6.55M revenue share (19.9%) — offline payment remains significant.

→ All five payment methods are within a $157K revenue band — no single method holds a dominant position.

→ Middle East is the top revenue region at $8.30M — approximately $190K ahead of North America ($8.28M).

→ Europe lags slightly at $8.11M — a narrow 2.3% gap vs Middle East, suggesting real growth opportunity.

→ Tight regional spread ($8.11M-$8.30M) confirms a geographically balanced and de-risked sales portfolio.

04 Discount Impact Analysis

Higher discounts clearly suppress per-order revenue. Zero-discount orders average $749 vs $521 for the 21-30% band — a 30.4% drop. The bulk of orders (66.9%) sit in the 1-20% discount range.

Fig 5 — Left: Avg revenue per discount tier. Right: Order count per tier.

KEY INSIGHTS — Discount Strategy

→ No-discount orders ($749 avg) generate 30.4% more revenue per order than the highest-discount tier ($521).

→ 1-10% and 11-20% bands together account for 66.9% of all orders (33,450) — the highest-volume sweet spot.

→ High-discount (21-30%) orders are only 16.7% of volume but sacrifice the most per-order value.

→ Discount range is capped at 30% — suggesting a deliberate margin-protection policy across all products.

→ No-discount segment (8,216 orders, 16.4%) shows strong demand at full price — a loyal buyer segment exists.

→ Shifting volume from the 21-30% tier to the 11-20% tier could recover approximately $106 per order on average.

05 Ratings vs Revenue Analysis

Customer ratings have minimal impact on average order value — all rating bands sit within a narrow $653-$661 range. The rating distribution is concentrated at 2-5 stars with a near-equal spread.

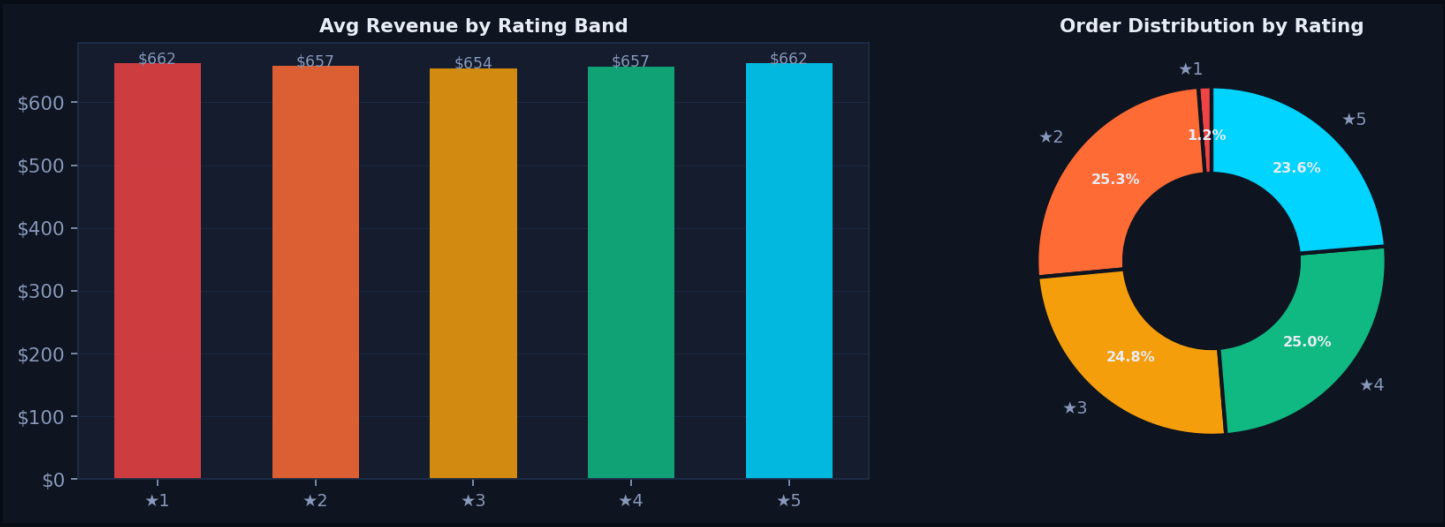

Fig 6 — Left: Avg revenue per rating band. Right: Order count distribution across ratings.

KEY INSIGHTS — Ratings and Revenue

→ Minimal revenue variation across ratings: highest avg ($661 at ★1 and ★5) vs lowest ($653 at ★3) — just $8 gap.

→ 5-star products account for 23.6% of orders (11,824) — the largest single rating band by volume.

→ 2-star and 3-star products together make up 50.1% of all orders — the majority buy mid-rated products.

→ Only 609 orders (1.2%) are for 1-star products — reputational risk from poor reviews is well-contained.

→ Rating does not predict order value, suggesting price and availability dominate purchasing decisions.

→ Improving mid-range (2-3 star) products could shift volume toward higher-rated bands and build brand loyalty.

06 Strategic Recommendations

Revenue Growth: Target Seasonal Lows

February and November consistently underperform. Introduce targeted flash sales or loyalty reward events in these months to smooth revenue seasonality without cannibalising peak months like January and August.

Category Strategy: Elevate Sports & Electronics

Sports and Electronics are the lowest-revenue categories despite similar order volumes. Exclusive product launches, bundle deals, or influencer marketing could help them catch up with Beauty and Books.

Discount Optimisation: Reduce Deep Discounting

The 21-30% discount tier sacrifices $228 per order vs no-discount. Shifting this segment to loyalty-based rewards or tiered membership discounts preserves revenue while retaining price-sensitive customers.

Payment Strategy: Incentivise Credit Card Use

Credit Card ranks 4th despite offering the highest average order values. Card-exclusive cashback, EMI options, or co-branded offers could increase high-value Credit Card transaction volume.

Regional Expansion: Invest in Europe

Europe is the lowest revenue region at $8.11M. Localised marketing, faster regional delivery, and partnerships with European logistics providers could close the $190K gap with the Middle East.

Ratings Improvement: Focus on 2-3 Star Products

Over 50% of orders are for 2-3 star products. Post-purchase review incentives, quality improvement programmes, and better product descriptions for low-rated items can drive ratings and long-term customer retention.
